Fire Sprinkler Plans and Calculations
Submittal Guidelines

PURPOSE

To maintain consistency and provide information to designers and installers of fire sprinkler systems for all occupancies.

SCOPE

The Salinas Fire Department (SFD) has established the following basic requirements for the submittal of plans and specifications for all fire sprinkler systems being installed within the jurisdiction of the Salinas Fire Department.

These requirements apply to all new required or non-required fire sprinkler system installations in either new buildings or existing buildings.

Fire sprinkler systems shall be designed, installed, and maintained in accordance with NFPA 13 2010, Installation of Fire Sprinkler Systems.

WORKING PLANS

Fire sprinkler systems require separate plans, application, review, permit and fees. Plan submittal shall include the building construction permit application number, and shall be shown or noted on the plans. Fire Department approval of the Building Construction Permit Application does not include any of the following named systems.

Submit Fire Plan Check application to Permit & Inspection Services, and three (3) complete sets of plans & calculations (min scale: 1/8” = 1’) stamped & wet signed by a licensed/registered design professional, and two (2) sets of equipment listings and calculations.

The following plans and specifications shall be sent to:
   Fire Plan Check
   c/o City Permit Center
   65 W. Alisal St
   Salinas, CA 93901

Working plans and a signed copy of the owner's certificate shall be submitted for approval to the SFD before any equipment is installed or remodeled. Submittals shall include the manufacturer's installation instructions for any specially listed equipment, including descriptions, applications, and limitations for any sprinklers, devices, piping, or fittings. Deviation from approved plans shall require permission of the SFD.
Working plans shall be drawn to an indicated scale, on sheets of uniform size, with a plan of each floor, and shall show those items from the following list that pertain to the design of the system:

1. Name of owner and occupant.
2. Location, including street address.
3. Point of compass.
4. Full height cross section or schematic diagram, including structural member information if required for clarity and including ceiling construction and method of protection for nonmetallic piping.
5. Location of partitions.
6. Location of fire walls.
7. Occupancy class of each area or room.
8. Location and size of concealed spaces, closets, attics, and bathrooms.
9. Any small enclosures in which no sprinklers are to be installed.
10. Size of city main in street and whether dead end or circulating; if dead end, direction and distance to nearest circulating main; and city main test results and system elevation relative to test hydrant.
11. Other sources of water supply, with pressure or elevation.
12. Make, type model, and nominal K-factor of sprinklers including sprinkler identification number.
13. Temperature rating and location of high-temperature sprinklers.
14. Total area protected by each system on each floor.
15. Number of sprinklers on each riser per floor.
16. Total number of sprinklers on each dry pipe system, preaction system, combined dry pipe-preaction, system, or deluge system.
17. Approximate capacity in gallons on each dry pipe system.
18. Pipe type and schedule of wall thickness.
19. Nominal pipe size and cutting lengths of pipe (or center-to-center dimensions). Where typical branch lines prevail, it shall be necessary to size only one typical line.
20. Location and size of riser nipples.
21. Type of fittings and joints and location of all welds and bends. The contractor shall specify on drawing any sections to be shop welded and the type of fittings or formations to be used.
22. Type and locations of hangers, sleeves, braces, and methods of securing sprinklers when applicable.
23. All control valves, check valves, drain pipes, and test connections.
24. Make, type, model, and size of alarm or dry pipe valve.
(25) Make, type, model, and size of preaction or deluge valve.

(26) Kind and location of alarm bells.

(27) Size and location of standpipe risers, hose outlets, hand hose, monitor nozzles, and related equipment.

(28) Private fire service main sizes, lengths, locations, weights, materials, point of connection to city main; the sizes, types and locations of valves, valve indicators, regulators, meters, and valve pits; and the depth that the top of the pipe is laid below grade.

(29) Piping provisions for flushing.

(30) Where the equipment is to be installed as an addition to an existing system, enough of the existing system indicated on the plans to make all conditions clear.

(31) For hydraulically designed systems, the information on the hydraulic data nameplate.

(32) A graphic representation of the scale used on all plans.

(33) Name and address of contractor.

(34) Hydraulic reference points shown on the plan that correspond with comparable reference points on the hydraulic calculation sheets.

(35) The minimum rate of water application (density or flow or discharge pressure), the design area of water application, in-rack sprinkler demand, and the water required for hose streams both inside and outside.

(36) The total quantity of water and the pressure required noted at a common reference point for each system.

(37) Relative elevations of sprinklers, junction points, and supply or reference points.

(38) If room design method is used, all unprotected wall openings throughout the floor protected.

(39) Calculation of loads for sizing and details of sway bracing.

(40) The setting for pressure-reducing valves.

(41) Information about backflow preventers (manufacturer, size, type).

(42) Information about antifreeze solution used (type and amount).

(43) Size and location of hydrants, showing size and number of outlets and if outlets are to be equipped with independent gate valves. Whether hose houses and equipment are to be provided, and by whom, shall be indicated. Static and residual hydrants that were used in flow tests shall be shown.

(44) Size, location, and piping arrangement of fire department connections,

(45) Ceiling/roof heights and slopes not shown in the full height cross section.

(46) Edition year of NFPA 13 that the sprinkler system is designed to.
